

**IFHOLDING GMBH**

As a globally operating company, IF Holding GmbH specializes mainly in the fields of consulting and project activities, renewable energy sources, trade, and supplier sourcing.

## Our Vision

All our services are driven by our vision: to execute prospective projects for a common sustainable future.

We perceive ourselves as a contact entity for the whole process chain from planning to funding, craftsman's services and project management to project administration.

In order to achieve the best possible results, we work exclusively with partners who build their services on years of experience.

## Our Team

Our team consists of entrepreneurs, consultants, engineers, craftsmen and architects with years of experience who are passionate about the pressing challenges of our time, technical changes and the impact of climatic changes.

Our high commitment and continuous training to keep abreast of the times guarantee the best results for our customers.

## Consulting

As consultants, we support national and international projects:

- Construction of plants in Turkey
- Mediation of contacts with manufacturers in Turkey
- Settlement of Turkish companies in Germany
- Tax consultancy in foreign matters
- Legal consultancy in foreign matters
- Formalities and funding in establishing enterprises in Germany and Turkey
- Enterprise economic and technical consultancy, mainly for civil engineering, food and beverage producers, industries, trades, service providers, towns, municipalities, and private clients.

## Project Activities

Project activity is a complex process involving various resources on both the customer's and supplier's side. In all our projects, we always keep sustainable solutions in mind.

Do you need an experienced project partner? Then contact us. IF Holding operates in various project activities, such as in the areas of trade and real estates, as well as solar, photovoltaic and LNG projects.

In construction projects, IF Holding will take over the whole project management from architectural planning to site management to project administration. We will also be happy to work for you and together with you.

## Renewable Energy Sources

Climate protection concerns us all. With strong partners, IF Holding offers precisely the solutions we need for transition to new energies.

Invest with us in a safe future for you, your children and our future world.

### Energy Consultancy and Optimization

Increased energy or raw material costs? We will show you which optimization options are currently important and effective. Based on many years of experience and extensive expertise, we will develop future-oriented concepts for you. As a BAFA (Federal Office of Economic Affairs and Export Control) listed consultant, you can also benefit from consultancy subsidies with us.

### Photovoltaic Modules Sunman

Our lightweight modules are characterized not only by their low weight, but also by their flexibility and the possibility of bonding the modules to eternit and trapezoidal sheet metal roofs or to roofing bitumen felt using special silicone. Thanks to our bonding technique, we do not need a supporting structure. The panels can also be installed on the facades of buildings with the help of supporting structures

### Wind Energy

We are a competent contact person here for you – from projects of wind power plants to complete service. We guarantee modern technologies, exceptionally favourable running costs, 98 % efficiency, maximum safety, and very long service life.

### Heat Pump or Geothermal Heating

Whether it is geothermal heating or an air/air heat pump, now it's time to switch to an economical alternative. We will advise you independently and professionally install your heating system through our service team all over Germany.

### Hydrogen

Our motto is: Failure was never a reason for us to give up anything.

That is why we are also dealing with the topic of hydrogen. Hydrogen can be produced using fuel cells. It can be stored as energy and heat houses. According to experts, this universal element even has the potential to make a decisive contribution to the energy transformation. Only a combination of different approaches will lead to success in the field of renewable energy. Therefore, it is necessary to combine photovoltaic systems with fuel cells, because the sun gives us electricity and water gives us hydrogen.

## Supplier Sourcing

Qualified and reliable suppliers are an important linchpin of success. IF Holding will advise and support you in your search for suppliers which would provide you with the required result

- ✓ Verified and certified suppliers
- ✓ Mediation of business contacts
- ✓ Structured procedure
- ✓ Cost transparency
- ✓ Early results
- ✓ Support in legal matters
